

PRESS RELEASE

International recognition - SNCF Gares et Connexions, France's railway operator, chooses Archidata, a BIM-Operations technology from Quebec

Montreal, Octobre 28 2021 - Archidata and its French partner **Algo'Tech** were awarded the BIM-Operations of Digital Twins contract by **SNCF Gares et Connexions** following a call for tender as part of their project: BIM digital station warehouse 2020.

SNCF Gares et Connexions is carrying out a vast program of digital transformation of its built assets to improve its operational performance. It aims to modernize its internal operations by selecting innovative methodologies and tools.

For the first time in the world, the digital twins of 122 stations will be accessible online on a single platform. The data warehouse developed by Archidata will guarantee the reliability of the building data disseminated through the SNCF Gares et Connexion's computer network. This improved control of assets will guide the daily actions of SNCF Gares et Connexions G&C for the operation, maintenance, and development of stations.

Archidata offered SNCF Gares et Connexions its solution developed in Quebec that makes it possible (i) to integrate models produced within the framework of Revit and Retro-BIM projects, (ii) to check their quality, (iii) to extract the relevant information to generate a model intended for the management, operations and maintenance of buildings and (iv) to feed software and IT tools for property management.

In synergy with the SNCF Gares et Connexions team, Archidata will improve its tools for BIM-Operations to meet the growing needs of owners of large real estate portfolios looking to acquire specialized tools to monitor the evolution of their built assets over time. The No Code VISION technology of its French partner Algo'Tech will enable it to solidify the data exchange flows with the vast IT infrastructure of this client.

"I am proud that SNCF Gares et Connexions has opted for a Quebec solution that is off-the-shelf rather than trying to develop a new one. This confirms the leadership position that Montreal occupies in the development of innovative solutions" declares Mr. Dominique Dubuc, architect, President and founder of Archidata.
